

SOLUTION BRIEF

Box for the franchise partner portal

Give every franchise partner one source of truth

One content layer underneath every system your teams use, so partners see only their own content.

The challenge: As the franchise network grows, the content partners need sits in four systems — SharePoint, the marketing portal, Airtable and Dropbox. Guidelines are copied between them by hand and shared one link at a time. Every copy is another version to keep current, and another chance a partner sees content meant for someone else.

The solution: Box sits underneath the tools your departments already use. Files live in Box once and surface in SharePoint, Teams or the partner portal, so replacing the spring/summer guidelines in one folder updates every place they appear. Access is set per partner on the folder, not on a link, and every open is logged.

Three shifts that change how the portal runs.

1

From many copies to one source

Content lives in Box once and surfaces everywhere else. Nothing left to copy.

2

From manual links to governed access

Each partner gets a permissioned area, with expiry and download controls.

3

From retraining to business as usual

Teams keep working in the tools they know. The files sit in Box underneath.

Franchise partners: one place for the guidelines that apply to them.

Partner management: publish once, and everyone sees one version.

Marketing: swap spring/summer for autumn/winter in one folder.

Compliance: permissions, link expiry and a full audit trail.

68%

of the Fortune 500 manage content on Box.

1,500+

integrations, including SharePoint, Teams and Slack.

"We've started delivering solutions instead of managing the infrastructure around us. We're able to free up a lot of development and integration resources with Box."

What you get with Box

One content layer

Content lives in Box and is surfaced in SharePoint, Teams and your partner portal.

Permissions per partner

Access is granted on the folder, so one partner cannot see another partner's content.

Shared links with controls

Expiry dates, password protection and download limits on every external share.

One current version

Replace a file and every place it appears updates, with the full history retained.

Metadata and search

Tag artwork by brand, season and fixture type so partners find the right guideline.

Hubs instead of portals

Curate a collection per brand or per partner without building a portal to maintain.

Open to your stack

APIs, connectors and migration tooling bring content in from Airtable, Dropbox and SharePoint.

A full audit trail

See who opened, downloaded or reshared any file, and when.

Customer success and services

Consulting

Migration from SharePoint and Dropbox, and integration with your existing systems.

Customer success

A named team to plan rollout department by department.

Support

24/7 coverage across every market your partners trade in.

Education

Training for admins, internal teams and partner users.

AVAILABILITY

Enterprise Plus

ISO 27001

UK · EU data residency

Works with the systems your departments already run.

More than 1,500 integrations, so content stays in Box while marketing, property and store development keep working where they are today.

Microsoft Teams

slack

salesforce

SAP

workday

Start with one brand and one season.

Most teams begin with a single brand's guidelines for one season, move those partners across, then bring the next department's content over. Nothing is rebuilt as the network grows.

A partner folder in Box: the current guidelines, who can see them, and every prior version.
